PROFILE SUMMARY

Experienced in AI workflows with a strong focus on VLM, LLM, and agentic AI for intelligent automation and analysis in various real-world applications. Proficient in leveraging OCR for document text extraction and applying RAG for advanced retrieval and contextual insights. Skilled in Python and PySpark for large-scale data processing, with familiarity in Spark MLlib and PostgreSQL.

EDUCATION

Gandhi Institute Of Technology And Management

Aug 2022 – April 2026

B Tech, CSE AIML - CGPA - 7.51

Bengaluru

Mother Teresa Junior College

June 2020 – May 2022

Board of Intermediate Education - Percentage - 71.1%

Palamaner

Vijaya Vani (EM) High School

June 2019 – Mar 2020

Board of Secondary Education - Percentage - 80.16%

Chowdepalli

PROJECTS

RAG-Driven ARIA Agent: Intelligent Banking Form Validation & Assistance

- Developed an AI-powered banking validation system to automate the processing of customer forms (loans, account openings, and credit cards), enabling instant document validation and improved compliance reporting.
- Built an automated document processing pipeline using LangGraph to orchestrate OCR-based data extraction, validation, and report generation through deterministic and semantic AI checks.
- Implemented a Retrieval-Augmented Generation (RAG) architecture integrated with the Qwen 2.5 LLM to power the ARIA chatbot for context-aware customer assistance and executive-level summarisation.
- Designed intelligent validation workflows that reduced manual review effort and improved the accuracy and consistency of banking document evaluation.
- Technologies:** Python, LangGraph, RAG, Qwen 2.5 LLM, OCR (Tesseract, EasyOCR), Agentic AI, PostgreSQL

Deepfake Image Detection using FaceForensics++

- Developed a CNN-based deep learning model to detect deepfake images using the FaceForensics++ dataset, enabling accurate classification of real and manipulated facial images.
- Implemented and compared multiple architectures including MobileNetV2, InceptionNet, and ResNet to evaluate model performance and improve detection accuracy.
- Performed image preprocessing, augmentation, and normalization to improve model generalization and reduce overfitting during training.
- Evaluated model performance using accuracy, precision, recall, F1-score, and confusion matrix to benchmark different deep learning architectures.
- Technologies:** Python, TensorFlow, Keras, OpenCV, MobileNetV2, InceptionNet, ResNet, FaceForensics++, Deep Learning

EXPERIENCE

Andor Tech

Jun 2026 – Present

Software Engineer (Full-time)

Bengaluru, Karnataka, India

- Developed Python-based engineering solutions for automating ANSYS simulation workflows and engineering data analysis.
- Automated simulation workflows using PyMechanical, PyMAPDL, PyAnsys Core, and PyVista to extract, process, and visualize data from ANSYS Workbench files.
- Built intelligent agent-based automation workflows to streamline simulation data processing, report generation, and engineering decision support.

- Applied Scikit-learn clustering algorithms to analyze ANSYS simulation datasets and integrated AI-driven techniques for efficient pattern discovery and workflow automation.
- **Skills:** Python, Agentic AI, ANSYS Automation, PyMechanical, PyMAPDL, PyAnsys Core, PyVista, Scikit-learn, Data Analysis

Andor Tech

Dec 2025 – Jun 2026

Trainee Data Engineer (Internship)

Bengaluru, Karnataka, India

- Designed and developed AI-powered document processing pipelines using Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), and Agentic AI workflows for intelligent information extraction and automation.
- Built multi-agent systems using LangGraph to orchestrate document ingestion, OCR, retrieval, validation, and report generation, enabling automated decision-making workflows.
- Implemented Vision-Language Models (VLMs) and OCR frameworks including Tesseract, EasyOCR, and Docling to extract and structure text from PDFs, scanned documents, and images.
- Developed robust document parsing pipelines using Docling, PyPDF, PDFPlumber, and Unstructured to process complex PDFs containing text, tables, and images for downstream AI applications.
- Applied Machine Learning techniques for document classification, semantic retrieval, and intelligent content analysis, improving the accuracy of AI-driven document understanding systems.
- **Technologies:** Python, LLMs, RAG, Agentic AI, LangGraph, VLMs, Machine Learning, Docling, PyPDF, PDFPlumber, Unstructured, Tesseract OCR, EasyOCR

Andor Tech

May 2025 – Oct 2025

Trainee Data Engineer(Internship)

Bengaluru, India

- Developed and optimized data processing workflows using Python, Pandas, and PySpark to handle large-scale datasets in distributed environments.
- Designed and implemented ETL pipelines for efficient data ingestion, transformation, and loading across multiple systems.
- Performed data preprocessing and transformation to ensure data quality and consistency, and supported machine learning workflows using Spark MLlib.
- Managed database operations using PostgreSQL and contributed to improving data reliability and system performance.
- **Skills:** Python, PySpark, Pandas, Spark MLlib (Basics), PostgreSQL

MURTI Research Center

Jan 2025 – Mar 2025

Student Research Intern(Internship)

Bengaluru, India

- Conducted research on the Urban Heat Island (UHI) effect through analysis of academic literature and geospatial datasets to identify key environmental factors influencing urban temperature variations.
- Processed satellite imagery using Google Earth Engine (GEE) and performed spatial analysis with ArcMap to study temperature distribution across Bengaluru.
- Developed a temperature prediction model using Random Forest Regression and identified UHI hotspots to support data-driven urban planning and sustainability initiatives.
- **Skills:** Random Forest Regression

TECHNOLOGIES

Programming Languages: Python

Data Processing & Analysis: PySpark, Pandas

Database Management: PostgreSQL

Big Data & ML Tools: Spark MLlib (Basics)

AI & Advanced Technologies: Large Language Models (LLM), Vision Language Models (VLM), Retrieval Augmented Generation (RAG), Agentic AI, OCR(Tesseract, Easy OCR.,etc)

Development Tools: PyCharm, PgAdmin, VS Code
